Data Structures - Internal Test 1

Name: _____ (de-identified) Roll No: S-102

Max Marks: 10 Time: 30 min

Q1. Define a stack and name its main operations.

A stack is a data structure used to store data in memory. It follows FIFO order like a queue.

The operations are push and pop.

Q2. Explain how binary search works.

Binary search checks every element one by one from the start of the array until the required element is found.

Its time complexity is O(n).
